LLM-based logic

# Sandeep Singh

Full-Stack Developer | MERN, Next.js, FastAPI, Docker | Crafting  
End-to-End Web Applications

Kanpur, Uttar Pradesh, India

## Summary

I'm a passionate Full Stack Developer with a strong foundation in the MERN stack (MongoDB, Express, React, Node.js) and growing expertise in FastAPI and AI technologies like LangChain & Gemini. I love turning ideas into real-world products—from e-commerce platforms to AI-powered productivity tools.

I've built projects integrating JWT authentication, role-based access, payment gateways (PhonePe, Paytm), and ImageKit/Cloudinary for media handling.

Recently, I've been focused on combining FastAPI with LangChain/ Gemini to create AI-powered applications with a scalable backend architecture.

I'm always learning, experimenting, and improving—whether it's building from scratch, optimizing app performance, or contributing to open source.

I enjoy working in environments where I can contribute end-to-end—from frontend UX to backend API logic, with a sharp focus on performance, security, and user experience.

Let's connect if you're into full-stack dev, AI apps, or just want to collaborate on cool projects!
